TEXAS TALLY
FOR
1960
Volume 3
Dedication

This yearbook is dedicated to Mr. Lacy H. Hunt, identified prominently with business, forestry, and conservation throughout Texas and the nation. Mr. Hunt is President of the Lacy H. Hunt Lumber Company, Inc., in Nacogdoches, Texas, a lumber company that operates as an export business, shipping lumber and other timber products and mine props to Mexico and other foreign countries. The export business is a direct outgrowth of the historic old Tilford-Hunt Lumber Company owned by Mr. Hunt's father in partnership with the late T. Tilford. At one time the Hunts also owned a sawmill at Lacyville.
Lacy Hunt's interest in lumbering stemmed from the occupation of his father, the late Andrew William Hunt, whose business included lumber manufacturing and tree farming. In 1920 Mr. Hunt began working in a lumber company office owned by his father, and since 1934 he has been president of the firm.

During World War II Mr. Hunt gave freely of his time, judgment, and experience to the National War Production Board on which he served as a member of the Softwood Loggers and Lumber Manufacturing Advisory Committee. For his service to the war effort, Mr. Hunt received an official certificate of award from the War Production Board. Other organizations and associations dealing with forestry in which he is a director or a member are: Director, Forest Farmers Association; member of the Advisory Committee to the Southern Pine Industry Committee; member of the National Affairs Committee for the National Lumber Manufacturers Association; member of the Texas Forests Industries Committee, branch of Forest Products Industries, Inc., of Washington, D.C.; and County Chairman, Committee for Economic Development, New York City.

Lacy Hunt is a past member of the Board of Directors of the Nacogdoches Chamber of Commerce, having served as President in 1939-1940.

From the inception of the Department of Forestry in 1947, for which he was greatly responsible, Lacy Hunt has been a strong supporter of the Department. To many of the students in the Forestry Department he has been a generous benefactor through the Lacy Hunt Scholarships which are awarded at the annual Sylvans Club Christmas Banquet. To the faculty members he has been a close and congenial friend who is always willing to lend an ear and discuss problems or topics of mutual interest.

May the close bond of friendship continue into the years ahead.
Foreword

We, the Texas Tally staff, have tried to present in this, the third Texas Tally, a pictorial record of the past year's activities. This year we have included, for the benefit of those of you who are no longer with us, an alumni directory.

We wish to thank Dr. Baker for his many hours of patient assistance. We also wish to acknowledge all of those who put in time preparing articles and helping the staff put the final product together. All in all we feel that we have done a creditable job, and we hope that you will enjoy reading it as much as we have enjoyed preparing it for you.

Report on The Department of Forestry

Dr. Arne K. Kemp

It seems as though it has been only a few months since I wrote a report for the "Texas Tally," when I am again asked to submit a brief accounting of the department and its activities. It is a pleasure to give you a report of the progress made during the 1959-1960 academic year.

ENROLLMENT

As usual, undergraduate enrollment has gone up again this year. This represents the sixth consecutive year from 1954 that we have shown an increase in the student body. The trend for the past six years is shown in the following summary:

1954 - 31
1955 - 50
1956 - 73
1957 - 84
1958 - 85
1959 - 90

Should such a trend continue, we may have one hundred or more students by the 1960-1961 year. The gradual increase in enrollment has been a healthy situation inasmuch as job placement of graduates has kept pace with the growth of the Department. Although employment opportunities for the present year are somewhat uncertain, our graduates should have no difficulty in obtaining suitable employment.

ACCREDITATION

One of the disappointments to the Department during the present year was the failure of the Department to attain accreditation by the Society of American Foresters. For the past five years the Department has been working diligently toward the objectives of accreditation and in the opinion of the Department and those acquainted with our program, we thought that we were ready for it this academic year. During the San Francisco Meeting of the Society, the Committee for Advancement of Forestry Education gave serious consideration to our request; and after much deliberation, the Committee recommended to the Council of the Society that Stephen F. Austin State College should not be accredited at this time. The Department was commended, however, for the fine progress it has made during recent years. Areas such as additional staff members, the relatively young staff, and departmental budget were pointed out for future improvement. Also brought to the attention of the College and Department was a recommendation by the Committee for Advancement of Forestry Education for a revision of the present standards which would place increased emphasis on institutional status, salary scales, number of staff members and a few other minor changes. As soon as we receive the new standards, we will be in a better position to
determine our course of action and how soon we can again attempt to ask for accreditation. During the interim, the Department will continue planning for the future.

**BUDGET, NEW FACULTY, and RESEARCH**

If the Forestry Department is to grow, effectively carry out an expanded program, and satisfy the standards for accreditation, our budget will need to be substantially increased. For the forthcoming biennium, the Department of Forestry is requesting a sizeable increase in appropriations. The funds will be partially used to hire at least two new faculty members, preferably in the fields of forest soils, entomology, or forest pathology. Thus, teaching and research will be strengthened in those fields. With an increased budget, each faculty member will be afforded an opportunity to increase his research activity, thereby bringing greater recognition to himself and the Department. To expedite the research work and operations of the Department, a semi-technical man will be hired by the Department.

**SHORT COURSES**

During the past year the Forestry Department has again sponsored a number of short courses for the people of East Texas. A three-day advanced short course in photogrammetry was offered to the foresters of East Texas during the year of 1959, with approximately twenty students in attendance. In June the fourth consecutive short course was held for the vocational agriculture teachers of Area IX. Each year new subject matter is offered to the teachers. At the request of the forestry profession, the Department is offering a three-day short course in elementary forestry statistics during April 18-20, of this year. The short course offerings partially fulfill one of the objectives of the Department, which is to perform a better service to the profession and to help to disseminate forestry information. As our faculty continues to grow, the number and variety of short courses will increase correspondingly.

**ALUMNI ASSOCIATION**

As usual, the Department of Forestry Alumni Association has been interested in the activities of the Department and has supported it in every way possible. During the past year, the Association has been generous in its financial contributions to various forestry activities and to the "Texas Tally." The Alumni Association is performing a valuable service to the Department, and we hope that all of the new graduates become members of it.

I should like to take this opportunity to commend the Editorial Staff of the "Texas Tally" and Sylvans Club members for the manner in which they have participated in and carried out many of their activities. Both organizations have served to broaden the background and future horizons of all forestry students.

The staff joins me in extending our greetings and wishes to all of you and, should you be in the vicinity of Nacogdoches, we invite you to visit with us.

The Sylvans Club was organized in the fall of 1946 by the students and faculty of the Forestry Department for the purpose of furthering and promoting fellowship among the students and to increase their knowledge by having programs highlighting speakers well versed in the many phases of forestry. The meetings are held biweekly except when planning and preparing for various projects. On these occasions the Club may meet every week or oftener.

The Club engages in numerous projects and school sponsored activities. Funds for the Club are obtained from many different sources, such as regular dues, tree planting and removal jobs and tree pruning jobs.

One of the Club's more popular events is the Annual Forest Field Day. On this day, the forestry students meet on the field of battle to determine which class can accumulate the most points in competition. The contests consist of such events as the three-legged race, egg throwing, horseshoes and tug-of-war.
The Sylvans scholarship is another of the club projects. This scholarship is awarded each year to a student scheduled to attend summer camp and who has contributed the most to the success of the club and the Forestry Department. Other projects include entering a float in the annual Homecoming Day Parade, an annual Christmas dinner-dance, and an occasional tea party.

Activities of the year usually end with a trip to the annual Southern Forestry Schools Conclave which is held on or about the first day of May.
"You gotta talk like gentlemen,...

"Help Me, George!"

...you gotta dance like gentlemen,...

"I just don't think it will work."

...and you gotta look like gentlemen!"
Christmas Dinner-Dance

Lacy H. Hunt Scholarship Award
SUMMER CAMP
Summer Camp

1959

There were sixteen innocents assembled that fateful June morning at the “base of operations” chow hall. They were: Bobby Roberson, James Smith, Gerald Collins, Jerry Rogers, John Bryan, David Lenhart, Tom Wood, James Stewart, Bill Beavers, Dan Kucera, Paul Schlimper, H. L. Lance, Hardy Carlton, James Hileman, Kenneth Burke, and “Charlie.” Also present were Doctors Samson and Baker and the camp chefs, Mr. and Mrs. Birdwell. These four dedicated people could not be considered innocent of the things to come.

During the first six weeks, the innocents were introduced to such things as chiggers, levels, ticks, transits, cloudbursts, “D” tapes, snakes, and Red Hill Lake. They also became acquainted with bologna sandwiches, topographic map construction, Mr. Birdwell’s coffee, armadillos, KP, and Doc Baker’s truck driving.

Some of the more fortunate students had some interesting personal experiences during this semester that warrant being preserved for posterity. For instance, John Bryan and Tom Wood became famous by mounting a tripod atop a stump and a discarded tractor respectively. Dan Kucera became the most hunted man in the woods. Charlie’s voice could be heard from Milam to the Sabine calling, “Dan, ver are you?” Dan would have answered him, but he didn’t know where he was either. That brush is pretty thick! Lance wondered why rabbits were so fond of stumps and de-
cided to find out. The experiment ended in disaster when the stump on which he was "experiments" collapsed.

The first semester ended and the second began without enough time in between to replenish the supply of Tums. If events happened fast before, they began to fly now. First, we came under the rule of "Sawmill" Hunt; then, "Flying" Dick Wallace took the wheel, and last but by no means least, Dr. Kemp appeared with our faithful conveyance and a long, long list of places to be conveyed to.

The logging and sawmill class took off in high "hotrod" style. All through the woods could be heard the cry, "For God's sake, look out, here comes Burke on the tractor!" And "Hey, somebody, come get my saw loose!" Some days were spent visiting sawmills and logging operations, riding blissfully through the beautiful East Texas piney woods in the open truck enjoying the wonderful sunshine. (Usually it rained like H.........) Some nights were spent drawing flow charts.

Outside of a few accidents that befell the logging tractor and the chain saw, nothing too exciting happened during this course. Except, of course, when Bill Beavers almost got disrobed by the chain saw and had to be cut loose. Then there was the day the log deck "accidentally" fell over against the sawmill carriage. "Take your tools and go to the house!" was Mr. Hunt's admonition to the party or parties concerned.

Oh, Silviculture, snap course. Hal Under the guidance of Dr. Wallace we all became familiar with the fine art of growing trees, marking trees, determining tree age, girdling trees, poisoning trees, trees, trees, trees. We were also exposed to the midnight ride and the better side of life in Louisiana.

Then came Utilization and Dr. Kemp. Boy, did things ever happen—reports, flow charts, resubmits, late to bed, early to rise, travel, all around the "south forty," East Texas, and Louisiana—you name it, we saw it!

I'm sure glad it's over!
East Texas yet!

Beats me!

"Yeah! A tea party!"

"Where are they?"

"I'll find them!"
What we need is more help!

The hat, the cap and the cat.

Finished!

Boy! The size of those logs.

What education will do.
"What's the use?"

Man! They look happy

Just ask them!

"I've had it."
Packaging Corporation of America
Tree Farm Family

By Lawrence K. Brink

It was three years ago, almost to the day, that I began work for American Box Board Company of Filer City, Michigan. Last year we merged with the Ohio Box Board Company and Central Fiber Products Company to form Packaging Corporation of America, one of the largest packaging firms in the United States. Our Filer City operation is built around two .009 Corrugating and one Bleached Kraft paper machines, the largest single paper mill in the lake states.

My first reaction, when asked by my company to help investigate the desirability of a Tree Farm Family was, “What in the cat-hair is that?” After two years of working with it and watching it operate, I am beginning to find out.

Why does Packaging Corporation feel that it needs a Tree Farm Family? Like most states, a majority of the forest land in Michigan is owned by individuals in relatively small parcels. However, we have to compete for these parcels in our land acquisition program with a highly developed recreation industry. That industry may place a value several times greater on a piece of timberland than we feel we can pay to grow forest products at a competitive price. Our policy has never been to own enough land to satisfy our mill requirements of 300,000 cords per year. Our holdings are those which can be justified as a good business investment, and only in such quantity as to provide a crutch during critical periods. Our management decided that a Tree Farm Family program seemed a logical supplement to our company owned and leased lands.

For those with adequate timber resources to qualify, our company offers a complete management service. We provide plans, supervision, tree planters, arrange for logging contractors, provide pulpwood markets and assist in selling other forest products to reliable wood-using industries, and many additional
benefits. In return, they make an oral agreement to maintain tree farm standards and give us first refusal on all pulpwood produced on their tree farm acreage. Certification in the American Tree Farm System is a prerequisite to Family membership. We often provide “Family” assistance and services, in order to help them qualify as tree farmers before we can officially welcome them into our Tree Farm Family. For those who do not qualify for “Family” membership, we assist in achieving certification in the American Tree Farm System.

What have we accomplished in two years? We have subscribed and placed under scientific management 66% as much land as our company felt justified in purchasing in twelve years. We provided tree planting machines and supervision during 1959 for the planting of 504,500 trees on lands of Tree Farmers. Our Tree Farmers produced about one-half as much pulpwood as was cut from company lands, and our “Family” director figures the program paid for itself in public relations and good will.

Our management has been pleased by the ready acceptance with which the program has been received. Plans are to further expand our membership from the present 98 owners operating 10,764 acres.

I shall be happy to forward, upon request, our booklet which gives additional details.
Second Annual Forestry Conclave

This year, the Sylvans Club had the privilege of attending the annual field day at Arkansas A&M as well as the second annual Forestry Conclave of the Southern Forestry Schools. Twelve students made the trip to Arkansas, leaving here early Thursday morning and arriving at College Heights, Arkansas, just in time for lunch. We made the trip in Smoky's pickup and H. L.'s station wagon. After Smoky had a flat and somehow passed the station wagon without seeing it, we had quite a race as each vehicle tried to catch the other. We all had a great time at the field day, but competition was pretty stiff. We did manage to win the contest by the "Whopping" majority of one point. The awards were presented at the banquet that same night. We all agreed that the Arkansas A&M students were excellent hosts and the best of sports.

After a comfortable night in the Arkansas dorms, we set out for Camp Grant Walker, about sixteen miles north of Alexandria, Louisiana. Jeff Carroll, Tom Wood, Paul Schlimper, Charlie Morgan, and Dan Kucera joined the caravan at the camp. The contest began about eight o'clock Saturday morning and lasted till 5:30 that evening, with the awards being presented at the banquet later that night.

We placed fifth in competition with ten schools. Georgia won first place, L.S.U. and Florida tied for second. Arkansas gained some revenge by edging us out for fourth place, and we came in fifth. Competition was sharper this year than last, and the spread of points was markedly less. We set out on the return trip the next morning with a resolve in our hearts to do better at Auburn.
"Wait for me!"

"Two to one Al goes in too!"

"Which way are we going?"

"Heave!"

"Better see about this!"
Cuba bound!

"My Dad can lick your Dad!"

Must be a bird!

Chipper: 1/4 H.P.

That's Fidel in the middle!
Departmental Field Day 1959

The day dawned bright and clear on October 3, the day of this year's departmental field day, barbecue, and bull shooting session; and by 7:30 a steady rain was falling. Dr. Samson, optimistic as always, was seen at about 8:15 swimming to the pickup with various odds and ends of recreational gear. Sure enough, by 9:00 the rain had stopped, and a few hardy souls were beginning to gather at the football practice field behind the new gym.

The day got off to a good start with some volleyball games which made up in energy what they lacked in finesse. More participants arrived, and soon the overflow from the volleyball courts started a game of touch football. Horseshoes began to make noise as they bounced off shins, rocks, heads, etc.

With the "pot right," as the saying goes, the regularly scheduled events got underway. Like the "little seed tick" in the song, the first to come was the sack race won by the Freshmen. The Juniors came in second and third; the Sophs and the Seniors made like sacks of potatoes and didn't go anywhere. This pattern followed for a series of races, with the Freshmen taking first place and sharing second and third place with one or another of the upper classes. The scene changed a little when the egg throw event came up; the Freshmen didn't place. This event went to the Sophomores as did the centipede race which followed it. When the football and baseball throw was over, we found the Freshmen back in the saddle with a first and a third place. Volleyball and tug-o-war went to the Juniors to keep them in the contest, and the horseshoes event was won by the Seniors.

About that time, somebody said, "Chow!" and all events were forgotten for the time being. There were enough beans and barbecue to feed seventy people, so the forty of us who were there ate pretty well. Appetizers included potato chips, pickles, onions, soda pop, candy bars, etc. All in all, we had quite a feed.

After chow, the scores were totaled, and the Juniors walked off with the honors. The scores were: Juniors 31, Freshmen 28, Seniors 22, and Sophomores 14. Thus ended another smash-em-up, break-em-up, enjoyable, departmental field day.
Don't bite your tongue

Oops!

Showoff!

Togetherness

What the heck -- ?

This is fun, I guess!
Forests and Wildlife

U. S. Bureau of Sport Fisheries & Wildlife—Fish and Wildlife Service
Phil D. Goodrum

Forests provide one of the most important habitats for wildlife of many kinds. From a game standpoint they produce the bulk of big game, especially deer and wild turkey. Gray and fox squirrels are found only in forested areas, particularly in the hardwood and pine-hardwood types.

From an economic standpoint, game of our forests is a multi-million dollar industry. It has been estimated, for example, that a single deer is worth about $200.00, with many persons sharing in the benefit. On this basis alone, to say nothing of the aesthetic values, the wildlife resource is worth conserving. If this worthy objective is to be achieved, wildlife must be given consideration in the forest management program.

Many persons assume that over-killing is a primary cause of game depletion. The truth is that habitat destruction or deterioration has reduced wildlife numbers more than all other causes combined. It follows that the best approach to game abundance is to conserve and improve our remaining habitat. We can no longer expect to find wildlife just anywhere. On the other hand, it will be most abundant where proper living conditions are provided.

Forest wildlife is most abundant in those areas containing a mixture of forest vegetation, including conifers, hardwood trees, shrubs and vines. Timber stands composed of a single species is a poor wildlife habitat. Wildlife is dependent upon a variety of forage and seed producing species. Shrubs, vines, and trees with cavities are required for escape cover and breeding sites. Most forest wildlife species benefit from open areas left in the woods. This is particularly true of wild turkeys which require such areas for nesting and rearing young.
Public demand for hunting and fishing imposes a responsibility upon foresters that should not go unheeded. To meet this responsibility it behooves the forester to learn how to coordinate forest and wildlife management.

SHORT CUT TO TOMORROW!

LOOK to the future with confidence and set your sights high. And look to natural gas service for the finest in modern conveniences... dependable and economical.

UNITED GAS SERVING THE Gulf South

YES, in forestry, we now can shorten the time it takes to get Tomorrow's job done.

We can do this largely because our search for better ways to speed up the forestry processes has been accompanied by unprecedented developments in the field of forestry equipment and supply. The tools for Tomorrow's job are available now—today!

Much of this development springs from research at Forestry Suppliers, Inc., the nation's oldest and largest forestry supply house. Its new Catalog No. 9, issued this spring, lists more than 2,000 items—quality items from all corners of the globe.

Sooner or later, as a professional forester, you will turn to Forestry Suppliers, Inc. for your tools and equipment. So why not start in 1960? Write today for your copy of Catalog No. 9.

Economics and Markets Are Essential To the Practice of Forestry

An important incentive to good forest management and the growing of trees as a regular crop is the pulp and paper industry's increasing number of conveniently located mechanized pulpwood yards. International Paper Company has built more than one hundred of these reliable market places throughout the South.

As the industry learns how to use more hardwood in addition to pine, a wide range of new end products is being brought into the Southern economy and the useable forest resource is thus greatly expanded. This makes it possible for tree farmers and other landowners to manage, harvest, and market the complete tree crop more efficiently and more economically.
