The cover of this year's TEXAS TALLY is Weldwood Industrial Flexwood and is genuine Red Gum veneer.

Weldwood Flexwood—developed by United States Plywood—is genuine veneer permanently laminated to either non-woven fiber backing (Industrial Flexwood) or a cloth backing (Architectural Flexwood), and by a special flexing process is made extremely pliable. It is available in more than forty domestic and imported woods of choice grain and figure.

Weldwood Industrial Flexwood is sold in large sheets as well as bonded to substrates such as aluminum and steel, by our Flexible Materials Division in Louisville, Kentucky. Substantial sales are being realized from the automotive industry for interior decorative trim on the Chrysler, and from fabricators of metal partitions, such as E. F. Hauserman and Virginia Metal Products, as well as from other large manufacturers—Aero Commander Aircraft, Brunswick Corporation, Lightolier, etc. Manufacturers of major home appliances, such as refrigerators (Amana) and dishwashers (Hobart "Kitchen-Aid"), also are using Industrial Flexwood for facing panels to match fine kitchen cabinet woods. Many other industries are exploring uses for this interesting and versatile decorative material, which can also be bonded to hardboard, Novaply, plywood, etc.

Weldwood Architectural Flexwood is sold largely as an interior wall decorating material and is applied with equal facility to flat walls, curved or formed surfaces, columns and pillars.

For additional information, write United States Plywood, Flexible Materials Division, Box 17183, Louisville, Kentucky 40217.

THE TEXAS TALLY

1965

Volume VIII
DEDICATION

The 1965 TEXAS TALLY is dedicated with deep appreciation to Mr. Ellis V. Hunt, Jr., Assistant Professor of Forestry at Stephen F. Austin State College. Mr. Hunt has been at S.F.A. 10 years, during which time he has been a great asset and inspiration to the College, School of Forestry, and especially to our Sylvans Club. He is always available when help is needed in studies or club activities. To you, Mr. Hunt, in appreciation for all of your help and patience, we dedicate this yearbook.

FROM A FORESTER'S FIELDBOOK

Forestry's fascination is its dynamic nature! It is a profession ever changing, led by men who will never see, in the distance, that the job is almost done.

Gifford Pinchot broke "new ground" as the founder of the nation's oldest forestry school—at Yale, as the first chief of the U. S. Forest Service, and as the instigator of the practice of forestry on private lands in the United States.

Foresters today, likewise, break new ground to achieve goals which are no more readily in their reach than were the aims of Pinchot in 1900. His objectives have been accomplished, but the stalwart old ground-breaker never dreamed of fertilizing forests; of controlling weed trees, insects, and disease with aerially applied chemicals of a complex nature; of computing growth and drain on mathematical robots; and of detecting fires by scanning vast areas with remote-controlled TV cameras. Nor did he ever conceive that the nation would one day have an abundance of wood which would jeopardize the economic health of communities.

Into this exciting situation go SFA's 1965 graduates. Charged with all of the responsibility which Pinchot assigned to his neophyte foresters, but also charged with the responsibility of knowing how to wisely use the tools of the sixties for "the greatest good of the greatest number" of the citizens of the land "in the long run".

The young forester may mark timber, as did Pinchot himself, or he may plan the logistics and then supervise a chemical weed control operation. He may cruise timber for sale or purchase, as did Pinchot himself, or he may spend a few days in a data processing office, deriving from that cruise data the growth and drain of forest resources for management decisions or tax assessing. He may instruct sub-professional men on the use of the alidade, as did Pinchot himself, or he may plan the assault by 500 men upon the flank of a raging chaparral fire, using radio-controlled ground-to-air communications, photogrammetry, fire-retardant chemicals, and recently derived equations involving the physics of fire behavior.

The forester is, by nature, frustrated. He wants to get the job done. He works and plans as though he can but, when day is over, he realizes it won't be finished in his lifetime. Management techniques are always improving but markets must improve and products be developed to utilize the wood produced by better management. In turn, management is stimulated to grow wood better, faster, and at less expense. It is, in a sense, the cycle of competitive enterprise which made the nation great and which makes forestry one of the nation's great professions.

A forester is a professional man: a professional man works for a salary, not for wages; he works to get a job done, not to put in a certain number of hours. As such, the forester is expected to be a community leader—to take his place with physicians, teachers, and journalists interested in the common good.

A forester's role is not easily defined, and that—as indicated earlier—is what makes it fascinating. In a way, he is "all things to all men": counselor to lumberman, public relations man for his company or agency, personnel manager for subordinates, conservation specialist for local clubs and the press, public speaker in the schools for fire prevention and careers, disaster expert for the Red Cross and Civil Defense, and merit badge counselor for Boy Scouts.
A typical young forester's diary may read like this:

Monday morning: answered mail, checked and forwarded payroll, prepared report for Supervisor on Southern pine infestation in Compartment 21.

afternoon: dispatched to check a "smoke", requested marking crew's assistance on fire, fire-boss on Class C fire which was controlled at 5:30 p.m.

Tuesday morning: mapped and prepared report of Class C fire.

afternoon: inspected and instructed Timber Stand Improvement Crew.

Wednesday morning: met with Public School teachers on conservation education planning.

afternoon: investigated timber trespass (theft) in Compartment 5. No case.

Thursday morning: initiated 10% cruise of Smith tract, relative to its purchase.

evening: addressed Lion's Club on "Fiber Feast or Famine".

Friday morning: conducted safety school for personnel.

afternoon: checked ground control points for aerial photographs.

SFA's forestry faculty has tried to educate you—its 1965 grads—to handle these assignments with dispatch and dignity. We couldn't "train you" for the task—only educate you. Training comes with practice and this you must obtain "on the job."

On the job you must be willing: willing to do the dirty job, willing to endure the unendurable. Society of American Foresters' Vice-President Ernie Allen, an industrial forestry leader, recently noted that sheer, unadulterated hard work is the one way you can out-distance the man who might have the edge in intellectual capacity. Ernie Allen has hired and fired enough men to speak from experience. This teacher attests to the wisdom of work overcoming wit. You must be alert, alert to the needs of the organization, alert to the possibilities of doing a job more efficiently, alert to the motivations and idiosyncrasies of others, and alert to the far-reaching implications of what's going on today.

In the epidermal layer of a hard, indehiscent, one-seeded fruit, then, the reason for the practice of forestry is altruistic—whether in the regions of water economy as on the slopes of the Sierra Nevada; a recreation economy as in the Adirondacks of New York; a sports game economy as in the high country of New Mexico, a range economy as in the slash pine forests of South Florida, or a timber economy as in East Texas.

Thus, the betterment of mankind through environment control, or improved economic opportunities, is the aim of the professional forester. Two freshman classes at SFA have now heard me recite Longfellow's lines:

Lives of great men all remind us
We can make our lives sublime,
And departing, leave behind us
Footprints on the sands of time.

May your years at SFA, like this quatrain, be a frequent reminder that the forester keeps his eye upon the crown of the tree. There he finds the indicators of its vigor. Always looking up, too, he finds the inspiration and the vision for being a forester and a man.

Summer Camp Scholarship:
Lowell Hayes
Phi Eta Sigma, Forestry honor fraternity at Stephen F. Austin State College, has initiated charter members and elected officers for the coming year. Officers named in the new fraternity include Grant Gaumer, president, Houston; Jimmy Hull, vice-president, Banquete; and Leon Levens, Secretary-treasurer, Corpus Christi.

Members initiated include Roy Beasley, Lufkin; Ken Prestridge, Olton; Bobby Cox, Henderson; Herschel Fields, Houston; William Gossage, Kilgore; and Levens, Gaumer, and Hull.

The Fraternity is sponsored by members of the faculty of the Department of Forestry at SFA, who are members of XI Sigma Pi, national honorary forestry fraternity. Phi Eta Sigma has submitted a petition for a charter to XI Sigma Phi, which currently lists 23 active charters with approximately 6,000 members.

Objectives of Phi Eta Sigma are to secure and maintain high standards of scholarship in forestry education; to work for the advancement of the forestry profession, and to promote fraternal relations among earnest workers engaged in forestry activities. Eligible members must be a junior or senior student academically, and rank scholastically in the upper 25 per cent of his class.

Forestry faculty members at SFA include Dr. Laurence C. Walker, department head, Dr. Robert D. Baker, Dr. Leonard Burkart, Dr. Gary Schneider, Ellis V. Hunt, Jr., Billy Dean Scott, and Dr. M. Victor Bilan.

Dr. Robert Maxwell, professor of history at SFA, presented a talk at the initiation ceremony entitled, "Texas Timber Barons." His address traced the lumbering history of Texas from the early explorers to the modern industrial managers.

LETTER FROM THE EDITOR

I wish to thank all of you who helped me to complete this volume of the TEXAS TALLY. I would especially like to thank Jerry Snider for his art work found on the front and back cover of this book.

And to our Advertisers I give my deepest thanks; for without them the 1965 edition of the TEXAS TALLY would not have been possible.

Thank you,

Lowell Hayes, Editor

THE FUTURE IS BRIGHT . . .

The future is bright for the forest farmer who plans ahead. This is true because more and better trees will be needed to meet our growing nation's demands for wood products.

Also, wood-using industries and related organizations are investing large sums of money in research activities to discover new uses and new markets for wood and wood products. As they are found, the forest farmer is in a favored position to profit from this demand for his trees. The landowner who manages his forest at a minimum of expense and grows trees of high quality will reap the greatest profit.

The future is also bright for the forester, as more scientific management must be applied to plantations and natural stands of timber in order for them to be brought into maximum production. To accomplish this, the services of dedicated and skilled foresters will be required.

Working together, the future is indeed bright for the tree farmer and the forester.

MERCHANDISE AT THE RIGHT PRICE

1915 —— 1965
HAVE YOU PLANNED YOUR CAREER?

Plywood is a household word, and United States Plywood Corporation is synonymous with leadership in the field of both hardwood and softwood plywood.

United States Plywood has led in making prefinished hardwood plywood available to homeowners in every economic bracket. The use of Weldwood prefinished paneling as decorative wall material for new homes, as well as older homes, appears to be limitless.

Sales have grown commensurately with production, which, together with research and other contributions in the building materials field, has increased United States Plywood sales from $107 million in 1952 to over $400 million in 1964. The reward for United States Plywood's quality of products and outstanding service has been its growth to one of the top 200 industrial corporations in this country. Chemists, Physicists and wood technologists—all working together in United States Plywood research laboratories—make it possible for more than 600 salesmen and sales engineers throughout this country and Canada to offer the best choice of structural and decorative materials available anywhere to architects, industrial users and builders.

Today the building industry represents a fantastic $60 billion market—it will continue to grow. United States Plywood Corporation could help you to become a part of the growth with that burgeoning market.
